Silverfin in a nutshell

Silverfin is a cloud software solution made by accountants, for accountants. It does this by streamlining compliance reporting and boosting efficiency, accuracy and profitability. It alleviates the stress and strain of compliance tasks and leverages its robust data and tools to support the development and delivery of advisory services.

Silverfin securely hosts financial data from client systems in a unified cloud-based Data Hub. Its templates standardised and automated by AI, create working papers, annual accounts, corporation tax returns and management reports. Automated workflows in Silverfin adhere to best practices, making compliance fast, accurate and streamlined.

But Silverfin's capabilities extend beyond compliance. Leading firms use Silverfin to drive their advisory services by analysing data and trends for their clients. With easy access to data and trends across the entire client portfolio, accountants can quickly identify risks and opportunities. Automated alerts identify risks and

"With easy access to data across the entire client portfolio, accountants can quickly identify risks and opportunities. Automated alerts identify risks and ensure clients receive the support they need."

Silverfin calls this enhanced approach has been praised by improving their day-to-day operations. With the data tools and time the advisory services and insights truly value. For many, Silverfin is the cornerstone of their digital transformation.

AccountingWEB's Buyer's Guide to Silverfin

Practical advice to help accountants choose the right software the first time

Brought to you by: **accountingWEB** In collaboration with: **silverfin**

client data you need at your fingertips

Your clients' data is in one place, directly from their own systems, so if your clients' data changes, so does the data in their Silverfin file.

All you have to do is link Silverfin to a new client's data sources like Xero, QuickBooks, Sage Cloud or others once. It then syncs their data in real time, so you know you're always working with the most up-to-date information.

Silverfin integrates with leading financial and management data systems, so if your clients' data changes, so does the data in their Silverfin file.

API architecture leverages existing product value to grow the way an industry works.

By time saving. When client data is mapped to a variety of best practices, it can be time-consuming. Mapping is a one-time effort using the initial client data. Once confirmed, any changes are automatically mapped, resulting in time savings for accountants.

Silverfin reviews new data and automatically maps it.
